According to the City of Ottawa, the average household includes 4 members and consumes nearly 1 cubic meter of water per day (788L). Here are some interesting points:

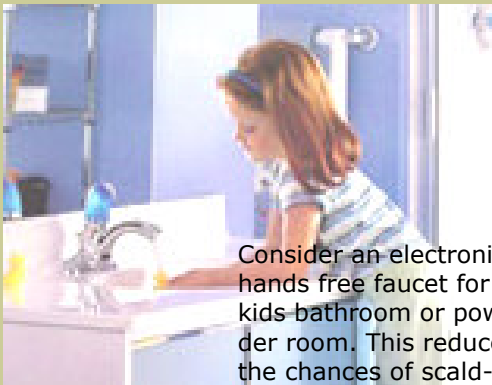

An **OUTSTANDING 65%** of water consumed in the home is in the bathroom(s) – 488L

A user will flush the toilet 5 times per day, consuming a total 65L of water.

80% of people shower rather than bathe, using 210L of water each time.

Building a home using water saving products gives buyers **SAVINGS FOR LIFE**. Here are the **FACTS**:

- 4 out of 5 toilet flushes per day is to dispose of liquid waste
- Only 6 liters of water is needed to flush solid waste, 3 liters to flush liquid waste
- Reducing your shower head to a **6 LPM** shower head saves **42%** of water

Consider an electronic hands free faucet for a kids bathroom or powder room. This reduces the chances of scalding, conserves energy and promotes clean hygiene.

Royal 305

Caroma set the standard by giving the world its first successful two button dual flush system in the nineteen eighties. In the nineties our research and development team responded with the remarkable 1.6 / 0.8 gallon two button dual flush system.

Proven through performance and acceptance by use in major hotels around the world, our award winning toilets are both user friendly and capable of saving up to 80% of your toilets previous annual water usage. Not only that, with a full 4" trapway, blockages become a thing of the past.

DELTA new water-efficient showerhead with H2Oknetic Technology was designed to satisfy GREEN, LEADS and water conservation initiatives, a 36% saving in water. This patented technology controls the shape of each water droplet for an enhanced shower experience; creating a warmer, more luxurious spray that blankets the body, giving the feeling of a high-flow shower with half the water.

Ideal for new construction or remodeling project, it will work with any shower arm.

DELTA new 535-5 series metal lever faucet with 0.5 GPM aerator provides a sleek, clean look with all the benefits of water conservation. This faucet delivers 2 GPM less than the standard products on the market. The valve design of this product also allows the user to always shut the faucet in the neutral position, reducing the risk of scalding!
